

bulkAirtable

Oct 04, 2024 • spencerburleigh.com/bulkairtable

I've used Airtable as a custom ERP across a few businesses. I've always been annoyed by how difficult it is to bulk export/import attachments so I built bulkAirtable.

Imports require routing via an S3 bucket / Google Drive folder; exports download directly to your computer.

Install

Python 3.9+. A personal access token with `data.records:read`, `data.records:write`, and `schema.bases:read`.

```
pip install "git+https://github.com/sburl/bulkAirtable.git#egg=bulkAirtable[upload]"
```

Put `BASE_ID`, `TABLE_ID`, and `AIRTABLE_TOKEN` in a `.env`. For imports, also configure S3 or Google Drive using the [setup instructions on GitHub](#)^[a]. Then:

```
python -m bulkAirtable.bulkUploadAirtable
python -m bulkAirtable.bulkDownloadAirtable
```
